## SYNOPSIS

Setup by enthusiasts of crypto technology enthusiasts then run by crypto activist and accompanied by great team, **OSINPAY** is ready to become the number one blockchain-based crypto auto trading platform globally.

# 1.1 Abstract

Currently, Binance is a centralized cryptocurrency exchange established in 2017 and is registered in Cayman Islands. Currently, there are 362 coins and 1243 trading pairs available on the exchange. Binance 24h volume is reported to be at \$4,240,334,926.78, a change of -35.81% in the last 24 hours. The most active trading pair is BTC/FDUSD with a 24h volume of \$851,641,094.97. Binance has \$64,040,206,064.95 in Exchange Reserves.

The screenshot shows the Binance website interface. At the top, there is a breadcrumb trail: Cryptocurrencies > Crypto Exchanges > Binance. The main header features the Binance logo, a 'Centralized' badge, and a 'Reserves data available' badge. To the right, there is a 'Trust Score' of 9 and a 'Start Trading' button. Below the header, a paragraph repeats the information from the abstract. A navigation bar includes 'Spot', 'Derivatives', and 'Exchange Token'. Below this, there are tabs for 'Markets', 'Leveraged ETFs', 'About Binance', 'Exchange Reserves' (marked as 'New'), 'Statistics', and 'Trust Score'. The main content area displays a table with the following data:

Spot	Derivatives	Exchange Token
\$4,240,334,915	362	1243
24h Trading Volume	Coins	Pairs

Additional features include checkboxes for 'Display Unconverted Data' and 'Display Market Cap', and a search bar.

Market activities that will become the future will be even more promising if more technology activists develop platforms on top of trading technology and apply them to be easier and more social to use.

Business is increasingly being encouraged to applicate their product on blockchain to be more secure and reliable.

OSINPAY will contribute to building an auto trading tools that utilizes blockchain technology. Auto trading tools under blockchain is safe without interruptions from third parties, bringing more people to easily trade cryptocurrency as a digital asset and providing a solution to make many comfortable trade ideas, convenient and safe for everyone.

## 1.2 Synopsis

From the data above, it shows that there are so many transactions in binance. Some traders such as retail traders, solo traders and retail investors are looking for the need to make transactions more easily and efficiently. some of them do only with limit orders, there are some who want to use certain conditions such as volume, ema, or other indicators. True, all indicators exist on other platforms such as tradingview, but to execute them, they have to move their view to the binance platform, and this is very frustrating.

OSIN's auto trade tool will completely change the trading experience without intervention from other parties, where the trade will work effectively in every activity that occurs from traders to execute any ideas.

The mission of OSINPAY is to build ecosystem on the Osin auto trade tools. Rather blockchain technology can be adequately and appropriately implemented in the present life and the future. Osinpay will bridge every activity carried out in the program such as for example deposits and user service fees. From this ideal, osinpay intends to provide a solution for more efficient time and security in long-term investing for sleeping investors.

**PROBLEM**

**PROBLEM**

## 2.1 Limited Financial Inclusion

Many individuals worldwide, especially in developing or remote regions, lack access to basic financial services like savings accounts and loans. The traditional banking model often requires physical branches and extensive paperwork, making it impractical for many to engage with. This exclusion from the formal financial system can perpetuate poverty and hinder economic development. Without access to banking services, individuals may resort to informal and often risky financial arrangements, limiting their ability to save, invest, and access credit.

Developers can build technology trust by building technology that the authorities cannot interrupt but the parties that should. With the cryptocurrencies operate on blockchain technology, which is decentralized and not controlled by any single entity, like a government or central bank. This decentralization can appeal to those who value financial independence.

## 2.2 Risk of Fraud and Identity

Many users are unaware of the security of their data, and the severity of many data security problems comes from internal. These internal problems often occur in various companies, whether intentional or not. In some cases, those internal unscrupulous can manipulate user data security and transaction easily without requiring much approval from the person concerned.

One-sided data changes also often occur when we use a product that is run online. If the changed data is simple, perhaps we don't mind it, but what if the modified information is the nominal value of our transaction? Maybe we won't stay silent.

## 2.3 Waiting Moment

Every trader does not have much time to wait for the momentum they want, especially retail traders. Retail trade really needs things that make it easier for them to carry out their plans according to.

## 2.4 There is no medium

Blockchain has been hot news lately, but many don't understand what blockchain is. It's entirely natural because this is something big. Of course, blockchain is no joke, and this proven technology could be the future. More platforms are needed to help more users take advantage of the blockchain, starting with a cryptocurrency exchange that has begun trading crypto assets.

Crypto asset trading is certainly enough for people who understand trading, but what about ordinary users who don't understand at all. An accessible medium that can help blockchain distribution for everyone is needed quickly.

**SOLUTION**

**SOLUTION**

### 3. Solution

OSINPAY provides a medium so that more users can enjoy using any trade ideas, one of which is through auto trading tool using chosen indicator. Easy copy trading can make it easier for users to participate in the cryptocurrency trading market. Bringing ease of access to involve more parties to use blockchain technology will significantly affect blockchain technology itself.

Auto trade by OSIN has become a pretty loved solution, bringing the concept of auto trading to digital asset trading such as cryptocurrency. It is one of the attractive options for non-traders to be able to start crypto asset trading. It is all about giving back to the blockchain community.

Our great hope to take osin as a long-term investment as a form of support to keep this project running and growing bigger. The journey is so far, but *"The only journey is the one within"*.

**PRODUCT**

## 4.1 How Auto trading works

The auto-trading platform will contain crypto traders with their respective trade records displayed. OSINPAY will make direct connections to well-known exchanges in an integrated manner so that followers can follow their favorite traders when making transactions by many indicators. Traders will enter the amount they want. Auto-trading will make transactions in the right proportion when their trader is trading, whatever value will be divided or multiplied proportionally according to the trader's portfolio.

## 4.2 Product Implementation

OSINPAY will be implemented on the public GhostRider Algorithm. GhostRider Algorithm is a collection of algorithms, the x16r and CryptoNight families, cycled in random and not so random patterns used to gain consensus on the on-chain generation and transaction of coins. These advanced features and active ecosystem make GhostRider Algorithm a natural fit for OSINPAY.

## CONCLUSION

CONCLUSION

## 6. Conclusion

The vision of OSINPAY is to build the next great blockchain platform. The origin value of this company remains inside the blockchain itself, a technology that is expected to become every need of digital services for our daily lives. With cryptocurrency as the backbone of its economy, we believe that this ecosystem will be transparent and sustainable in the future while maintaining security.

OSINPAY will make a breakthrough by creating a platform that applies blockchain while still having a solid business side for customers, not only taking advantage of their attention to this project. By doing so, we believe everyone will have an effect and can build more mediums that always consider blockchain in their products. There will be more users who feel safe using technology that has applied the blockchain in it.

The community can build this ecosystem by multiplying the transaction, such as creating an auto trade. However, many non-technical users don't understand and need a more specific starting point in cryptocurrency and technical traders can save more time. Therefore, the community desperately needs more platforms other than exchanges, one of which is auto trading by indicator on exchange, making it very easy for retail traders to initiate transactions on the blockchain.

OSINPAY was built with Ghost Rider Algorithm, initially using a hybrid blockchain technology solution to transition to a fully decentralized and autonomous system eventually. As a result, OSINPAY will develop and become the choice of needs in today's digital era and the future.
